Global Innovation Systems—A conceptual framework for innovation dynamics in transnational contexts

Authors: C. Binz, B. Truffer

Volume: 46

Issue: 7

Pages: 1284-1298

Abstract:

This paper proposes a framework for the analysis of technological innovation processes in transnational contexts. By drawing on existing innovation system concepts and recent elaborations on the globalization of innovation, we develop a multi-scalar conceptualization of innovation systems. Two key mechanisms are introduced and elaborated: the generation of resources in multi-locational subsystems and the establishment of structural couplings among them in a global innovation system (GIS). Based on this conceptualization, we introduce a typology of four generic GIS configurations, building on the innovation...

While universities have traditionally been viewed as a support structure for innovation, providing trained persons, research results and knowledge to industry, one of the main differences compared to previous approaches is that the Triple Helix model raised the university to an equivalent status. Thus, unlike previous institutional configurations in which universities had a secondary status or were subordinated to either industry or government, in the Triple Helix model the university emerges as an influential actor and equal partner.

Although the Triple Helix model is often used to depict a rather static scheme, with each actor in their own role, it is also used to describe the dynamic nature of the model in different European regions (Martin
